Art Unit: 1615

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to a process for preparing a particulate form of a non-crystalline, solid drug substance and a pharmaceutical composition comprising a co-precipitate having a core comprising core excipient and one or more drug layers distributed around the core.

Group II, claim(s) 10 and 20, drawn to a process for preparing an aqueous-based pharmaceutical formulation (that requires admixing the co-precipitate with a pharmaceutically acceptable aqueous media).

Group III, claim(s) 11-19, drawn to a process for preparing a particulate form of a non-crystalline, solid drug substance (that requires solubilizing the drug substance in a drug solvent to prepare a drug solution) and a pharmaceutical composition comprising a co-precipitate having a core comprising the drug substance and one or more co-precipitant layers distributed around the core.

2. As set forth in Rule 13.1 of the Patent Cooperation Treaty (PCT), "the international application shall relate to one invention only or to a group of inventions." Moreover, as stated in Rule 13.2 PCT, Unity of Invention is satisfied "where a group of inventions is claimed in one and the same international application, the requirement of

general inventive concept."

unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art so linked as to form a single

Page 3

The technical feature linking Groups I-III is a process for preparing a particulate form of a non-crystalline solid drug substance comprising the steps of: slowly adding a co-precipitant solution comprising the drug substance and a co-precipitating excipient solubilized in a non-aqueous solvent, to a slurry comprising a core excipient dispersed in an anti-solvent, to prepare a co-precipitate, wherein the non-aqueous solvent and the anti-solvent are miscible.

Shah (US 6,020,004) teaches a process for preparing microparticles comprising the steps of a) adding a solution or suspension of active ingredient to a polymer in an organic solvent; and b) isolating the particles (Figure 1). Example 1 discloses a process of a) adding an emulsion comprising active ingredient and poly(D,L-lactide-co-glycolide) to an excipient solution comprising glycine, sucrose, PVA and ethanol and b) isolating the microparticles.

Claims 1-9 (Group I) drawn to a process for preparing a particulate form of a non-crystalline, solid drug substance and a pharmaceutical composition comprising a coprecipitate having a core comprising core excipient and one or more drug layers distributed around the core are anticipated by the disclosure of Shah and lack novelty.

Therefore, the technical feature linking the inventions of Groups I-III does not constitute a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the prior art.

Therefore, the claims are not so linked by a special technical feature within the meaning of PCT Rule 13.2 so as to form a single inventive concept.

Moreover, Group II requires admixing the co-precipitate with a pharmaceutically acceptable aqueous media, which is not required for Group I.

Also, Group III requires solubilizing the drug substance in a drug solvent to prepare a drug solution, which is not required for Group I.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aradhana Sasan whose telephone number is (571) 272-9022. The examiner can normally be reached Monday to Thursday from 6:30 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward, can be reached at 571-272-8373. The fax phone
